Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non obvious), or to be industrially applicable have not been examined in respect of:

☐ the entire international application.

☒ claims Nos. 9-65

because:

☐ the said international application, or the said claims Nos. _____
relate to the following subject matter which does not require an international preliminary examination (*specify*):

☐ the description, claims or drawings (*indicate particular elements below*) or said claims Nos. _____
are so unclear that no meaningful opinion could be formed (*specify*):

☒ the claims, or said claims Nos. 9-65 are so inadequately supported
by the description that no meaningful opinion could be formed.

☐ no international search report has been established for said claims Nos. _____

☐ the nucleotide and/or amino acid sequence listing does not comply with the standard provided for in Annex C of the
Administrative Instructions in that:

the written form

☐ has not been furnished

☐ does not comply with the standard

the computer readable form

☐ has not been furnished

☐ does not comply with the standard

☐ the tables related to the nucleotide and/or amino acid sequence listing, if in computer readable form only, do not comply with
the technical requirements provided for in Annex C-bis of the Administrative Instructions.

☐ see Supplemental Box for further details.

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1-8	YES
	Claims		NO
Inventive step (IS)	Claims		YES
	Claims	1-8	NO
Industrial applicability (IA)	Claims	1-8	YES
	Claims		NO

2. Citations and explanations (Rule 70.7)

Document 1: Nichidai Shigaku (2002), Vol.76, No.5, p.425-433

Document 2: Enzyme Microb Technol (1997), Vol.21, No.3, p.203-211

Claims 1 through 8

The inventions relating to claims 1 through 8 do not appear to involve an inventive step in view of document 1.

Document 1 describes antibody production cells that can produce 6.6 to 7.1mg/L of IgM antibodies by culturing mouse hybridoma cell line B cells. There is a discrepancy between the antibody production volume of the invention described in document 1 and that of the Claims 1, 3, 5 and 6 of this patent application.

Document 2 describes that a mouse hybridoma cell line *Zac3*, created by a fusion of a mouse myeloma cell and lymphocyte cell, adjusts culture medium nutrient enhancement conditions and promotes expression such that it achieves a state in which 115 to 14,000mg/L or more of IgA from a state in which 14 to 42mg/L or more of IgA is generated.

A person skilled in the art could easily conceive of, with the aim of obtaining a large quantity of antibodies, attempting to produce the antibody-producing cells described in document 1 under the nutrient conditions described in document 2, and in so doing, this examination finds that the cells described in document 1 can also produce 100mg/L or more of IgM based on the description in document 2.

Also, because using a transforming cell, a prokaryotic cell and a CHO cell are ordinary means for producing antibodies, this examination finds that they are not particularly outstanding points.

Therefore, the inventions of claims 1 through 8, given the invention in document 1, are just inventions that could be appropriately achieved by a person skilled in the art.
